

SUCCESS STORY

PROJECT :

Kaiser Rehabilitation Stairs

PROCESS :

- **Client Request:** Catherine Wong, Sr. Project Manager from Kaiser, requested a quote for rehabilitation stairs in a 90-degree configuration.
- **Accessible Compliance:** The project required compliance with Accessible requirements.
- **Custom Drawings:** Our sales engineering department created custom drawings to meet the specific needs of the project.
- **Manufacturing Process:** Whitehall manufactured the stairs and meticulously broke them down for packaging, considering the size limitations of the existing elevators.
- **Delivery and Installation:** The stairs were delivered and installed by Kaiser employees, ensuring a seamless integration into the designated space.

These stairs are located an outdoor area on the 5th floor of the hospital to add to “rehabilitation” of the patients.
