

EVS Controller

The Electronic Valve Controller -

This controller is designed to control up to twelve solenoid valves simultaneously. Each controller is optionally available with a 24VAC, 50VA, class 2 UL/CSA listed transformer. In the event of sudden power loss, all programmed settings are retained. Controllers can be preprogrammed for stand-alone installations or linked together and optionally connected to a computer server provided by Acorn Engineering Company. The computer server can be used to monitor and program any Master-trol Controller connected to the system.

The Master-trol water management system is versatile and available in several configurations to suit your needs and budget. Master-trol Systems have proven to meet the needs of both correctional facilities and those facilities where water management is essential.

Specify:

- 0715-002-001 Not Programmed for Field Computer or Handheld Programmer
0715-003-001 Pre-Programmed at factory (See EVS, page 3 for program requirements)
