STOP WASTING TIME ON MANUAL EYEWASH TESTING

AUTOMATE YOUR
ANSI COMPLIANCE
WITH BASYC

ANSI standards require weekly activation of plumbed emergency eyewash and shower equipment. Not only is this time-consuming—it's risky. Manual testing procedures are vulnerable to human error, missed schedules, and incomplete documentation.

Why leave something so critical to chance?

Acorn Controls® BASyC® digital mixing valve and monitoring system automates the entire process, ensuring your facility meets ANSI requirements for plumbed emergency eyewash and shower equipment.

Model No. S1320
