NOTES TO INSTALLER:

1. Please leave this documentation with the owner of the fixture when finished.
2. Please read this entire booklet before beginning the installation.
3. Check your installation for compliance with plumbing, electrical and other applicable codes.

IMPORTANT

This fixture is intended to dispense water that has been lowered in temperature, but otherwise remains unchanged by the materials in the Bottle Filler.

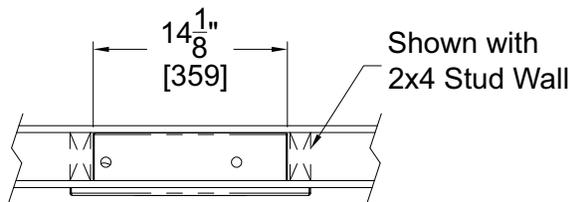

NOTICE

A dielectric coupling must be used to connect the Bottle Filler to the water supply. A nonmetallic coupler is furnished with this Bottle Filler to meet this requirement.

DIMENSIONAL DRAWING

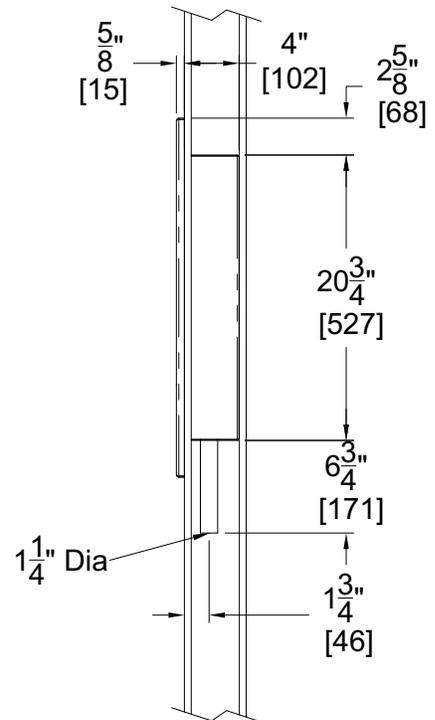

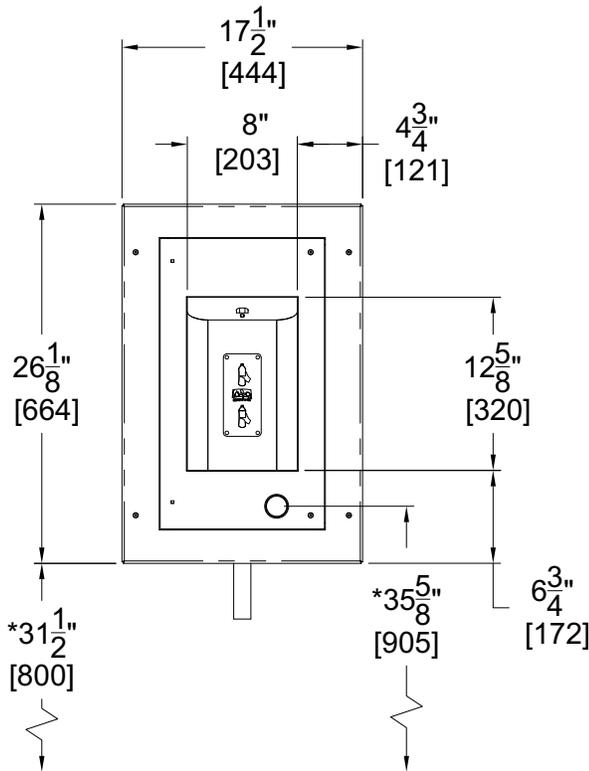

Prior to roughing in, consult with local, state, and federal codes for proper mounting height.

M-OBR4 Recessed Outdoor Bottle Filler

General Notes:

1. All dimensions are in inches [mm]
- *2. Dimensions shown are for recommended adult height. Adjust vertical dimensions as necessary to comply with federal, state & local codes
3. Stop valve not provided

NOTES: Dimensions shown for Adult ADA compliant installation. For Child ADA compliant parallel approach installation, decrease height of installation by 3 inches. Provide clear floor space as required. Adjust vertical dimensions as required to comply with federal, state, and local codes.

IMPORTANT:

1. Water Supply Service Stop Valve, and Water Connections to be supplied by others in accordance with local codes.
2. Waste is 1-1/4" Outer Diameter. Bottle Filler water inlet is 1/4" Outer Diameter Push-In Fitting. Water line by others.
3. Completely flush supply lines of all foreign debris before connecting to fixture.
4. Do NOT solder Tubes inserted into the Bottle Filler as damage to the O-Rings on the Push-In Fittings may result.
5. All burrs must be removed from outside of cut Tubes before inserting into Strainer or other components.
6. **WARNING:** Warranty is voided if installation is not made following current Murdock Mfg. installation instructions and if components are assembled to the fixture that are not approved by Murdock Mfg.
7. Fixture operates within water pressure range of 25 PSIG (174 kPa) to 105 PSIG (724 kPa). Warranty is void if the unit is allowed to operate outside the range of 20 PSIG (138kPa) to 105 PSIG (724kPa). Consult with UPC and local codes for maximum allowable water pressures.
8. ***Per UPC 609.10-All building water supply systems in which quick acting valves are installed shall be provided with devices to absorb the hammer caused by high pressure resulting from the quick closing of the valve. These pressure-absorbing devices shall be approved mechanical devices. Water pressure-absorbing devices shall be installed as close as possible to the quick closing valve***

PRIOR TO INSTALLATION:

1. Read all installation instructions carefully, before proceeding.
2. Carefully remove all fixture components from packaging, preventing scratching or damage. Inspect fixture and all parts from damages and all parts that are bolted on.
3. Provide mounting surface, adequate to support the fixture and loads on the fixture.
4. Provide rough-ins as shown on the rough-in and dimensional drawing, including water supply, drain pipe and gravel drain well. (See rough-in details)
5. Completely flush water supply lines of all foreign debris, before connecting to the fixture.

BOTTLE FILLER START UP (Refer to Installation steps on following pages prior to start up.):

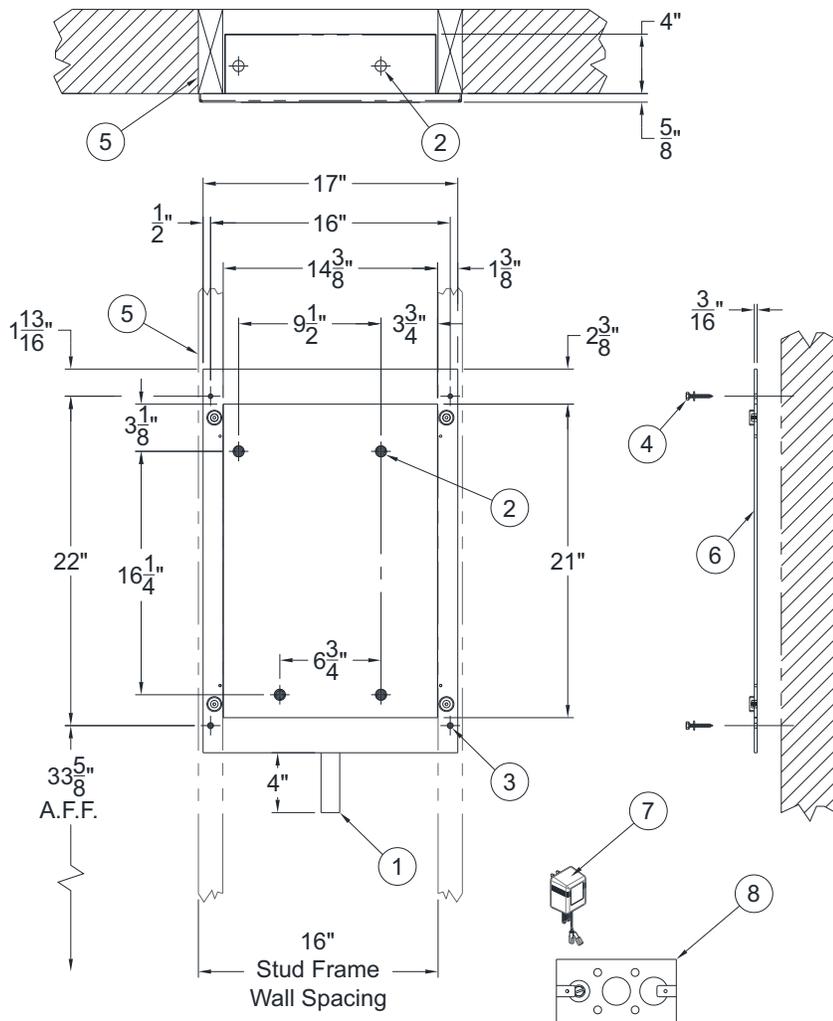

1. **Pushbutton Operated:** Air within the Bottle Filler System or the structure supply piping will cause an irregular spout outlet stream until purged out by incoming water. Press and hold Pushbutton until steady water stream is achieved
2. **Sensor Operated:** Hold container to be filled just below the Sensor in the center of the Filler Spout and then move the container upward and water flow will start automatically. When the container is almost filled, lower the container below the Sensor until the water stops flowing. (See label on the Bottle Filler.)

Mounting Installation.

1 Provide wall openings as indicated in rough-in detail provided. block-out for Bottle Filler and Provide Structural Support For Mounting Plate, \varnothing 1/4" anchor holes provided.

! IMPORTANT

- Standard M-0BR4 models include Pushbutton and Sensor operation and require Electrical Receptacle for Plug-in Transformer. Receptacle will not fit within Bottle Filler Box. Electrical Receptacle should be located within 4 to 5 feet fixture for Plug-in Transformer with 60" wire lead.
- Models with optional -BAT (Battery Operated) or -MO (Pushbutton Only Less Sensor) will not require Electrical Receptacle.
- Installation shown with stud wall (recommended when possible).
- Installer shall use Industry Standards for Best Practices to suit Wall Construction and Site Conditions for all other wall types.

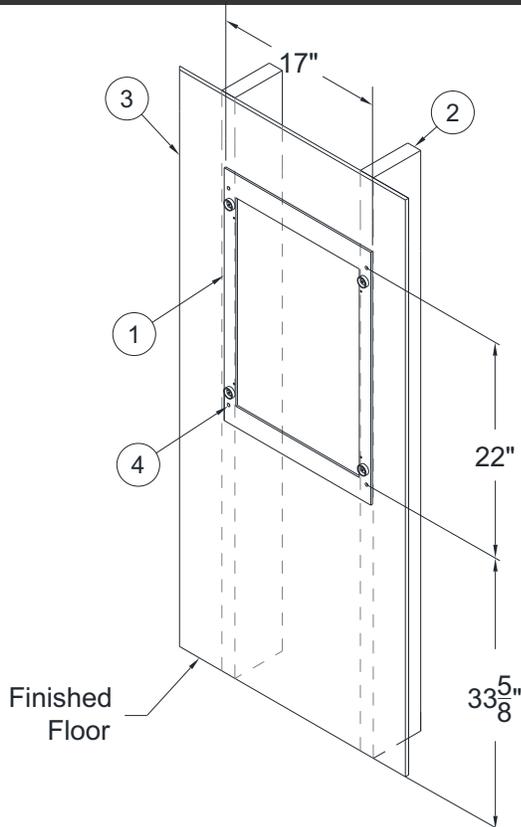

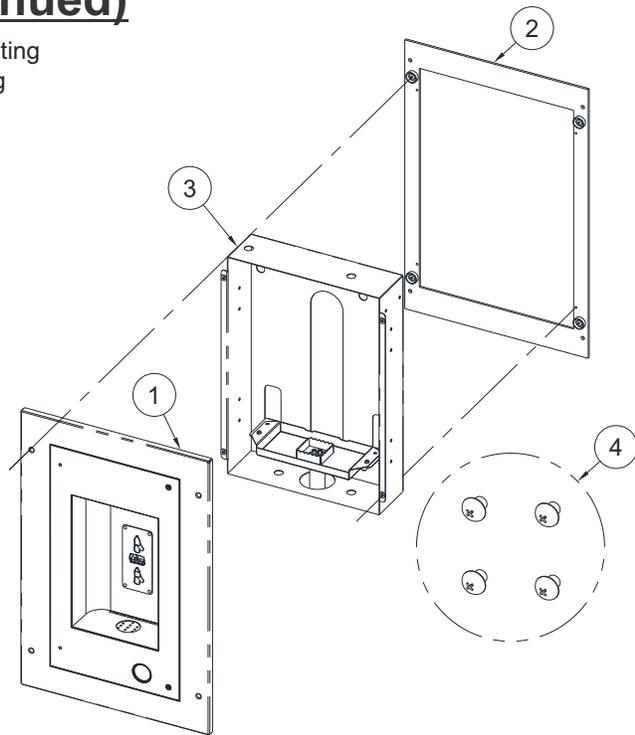

- ① 1-1/4" O.D. Bottle Filler Waste
- ② 1/4" NPT Bottle Filler Supply Inlet
- ③ Mounting Holes
- ④ 1/4" Anchoring Hardware, by others
- ⑤ 2x6 Stud Wall, for Ref. only
- ⑥ Mounting Plate
- ⑦ Plug-in Transformer for sensor Operated Control (Standard) See Note,
- ⑧ Standard units with Sensor Operation require Duplex Receptacle on GFCI Electrical Service Protected Circuit 100-240VAC, 50-60Hz, 9VDC, 0.8A (By Others)

NOTES: Dimensions shown for Adult ADA compliant installation. For Child ADA compliant parallel approach installation, decrease height of installation by 3 inches. Provide clear floor space as required. Adjust vertical dimensions as required to comply with federal, state, and local codes.

Mounting Installation (Continued)

2 Separate Fixture Panel, Bottle Filler Box, Mounting Plate and #10-32 x 1/4" Screws from packaging careful to avoid damage to fixtures and fixture sub-assemblies.

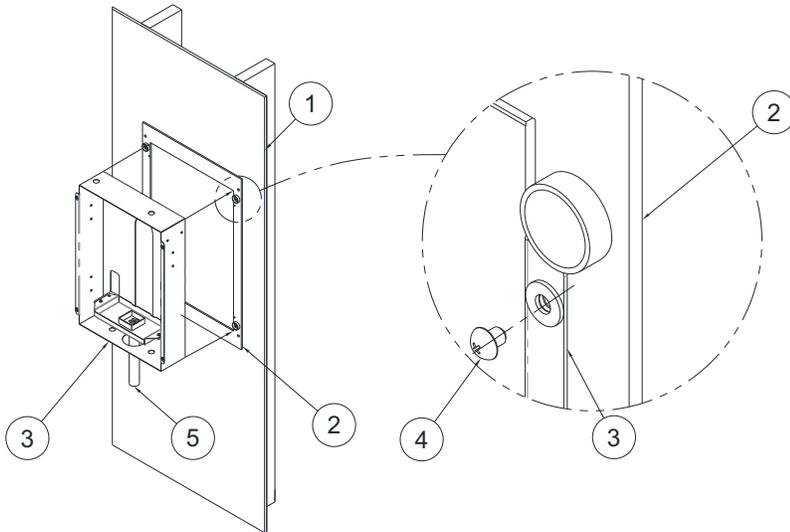

- ① Bottle Filler Panel
- ② Mounting Plate
- ③ Bottle Filler Box
- ④ (4) #10-32 x 1/4" Phillips Head Screws

3 Supporting Mounting Plate against wall, align Bottle Filler opening and Mounting Plate Ø1/4" Anchoring holes with structural support before fixing to wall with installer provided Anchoring Hardware.

- ① Mounting Plate
- ② 2x6 Stud Frame Ref. only
- ③ Finish Wall, Ref. only
- ④ Anchoring Hardware, provided by others

Bottle Filler Installation

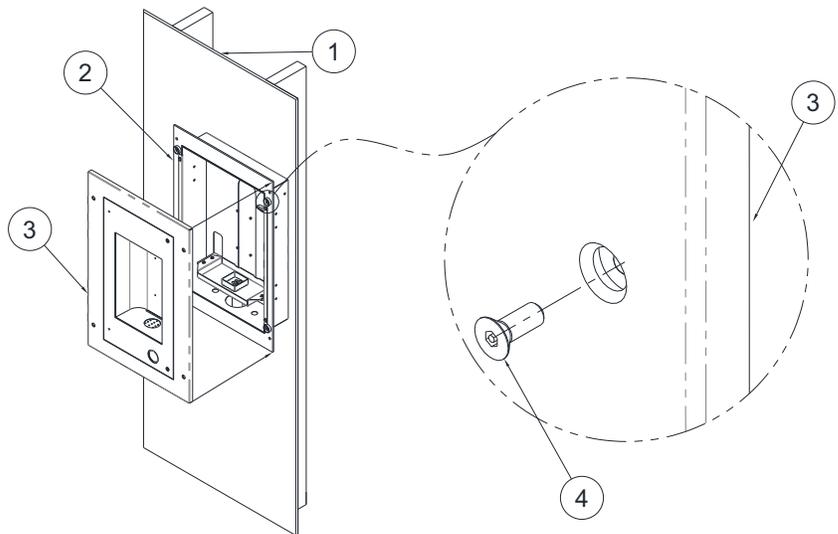

1 Position Bottle Filler Box in the center of the Mounting Plate opening and secure with #10-32 x 1/4" Phillips Head Screws.

- 1 Finished Wall
- 2 Mounting Plate
- 3 Bottle Filler Box
- 4 10-32 x 1/4" Philips head Screws
- 5 1-1/4" OD Tailpiece

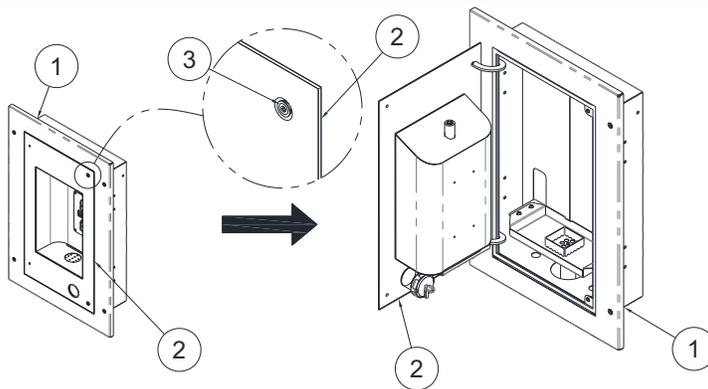

2 Position Bottle Filler Panel and center to Mounting Plate and secure with #10-32 x 1/2" Stainless Steel Flat Head Center Reject Hex Screw.

- 1 Finished Wall
- 2 Mounting Plate
- 3 Bottle Filler Panel
- 4 10-32 x 1/2" Hex Head Center Reject Screws

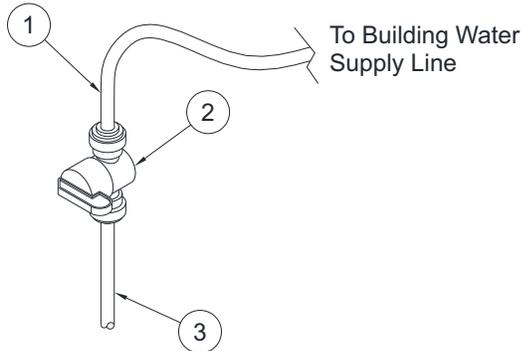

3 With Bottle Filler Panel installed, open Bottle Filler, remove the #10-32 x 3/4" Flat Head Center Reject Screws and swing open Bottle Filler.

- 1 Bottle Filler Panel
- 2 Bottle Filler
- 3 #10-32 x 3/4" Screws

Supply Connections

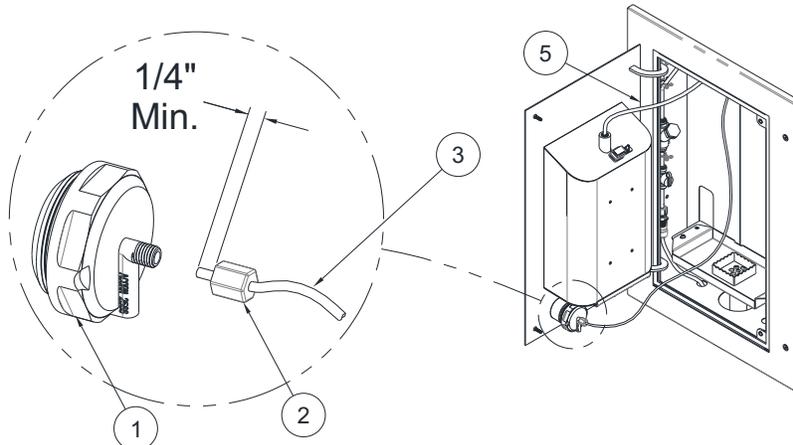

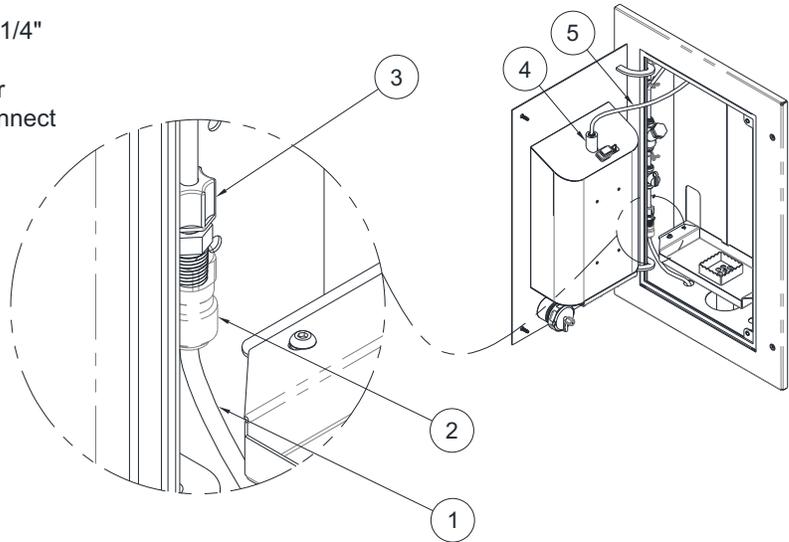

1 It is recommended that a Supply Stop Valve be installed before making up connections to fixture.

- 1 3/8" Water Supply Tubing
- 2 Supply Stop Valve, provided by others
- 3 Water Supply Outlet

2 Connect the Water Supply Connection to the 1/4" OD Tube x 1/4" NPT Male Fitting. (Note: An adapter is required to connect the Main Water Supply Line to the 1/4" Male NPT Fitting). Connect the blue 1/4" OD Tube to Bottle Filler Spout.

- 1 Water Supply Tubing
- 2 3/8" OD x 1/4" Female NPT Adapter (For Reference Only)
- 3 1/4" OD x 1/4" NPT Male Fitting
- 4 Bottle Filler Spout
- 5 1/4" OD Blue Tube

3 Connect the 1/8" OD Polyethylene Air-Line from the Valve to the pushbutton.

- 1 Pushbutton
- 2 Ferrule Nut
- 3 1/8" Polyethylene Air-Line, Clear

! IMPORTANT
Test unit for leaks.

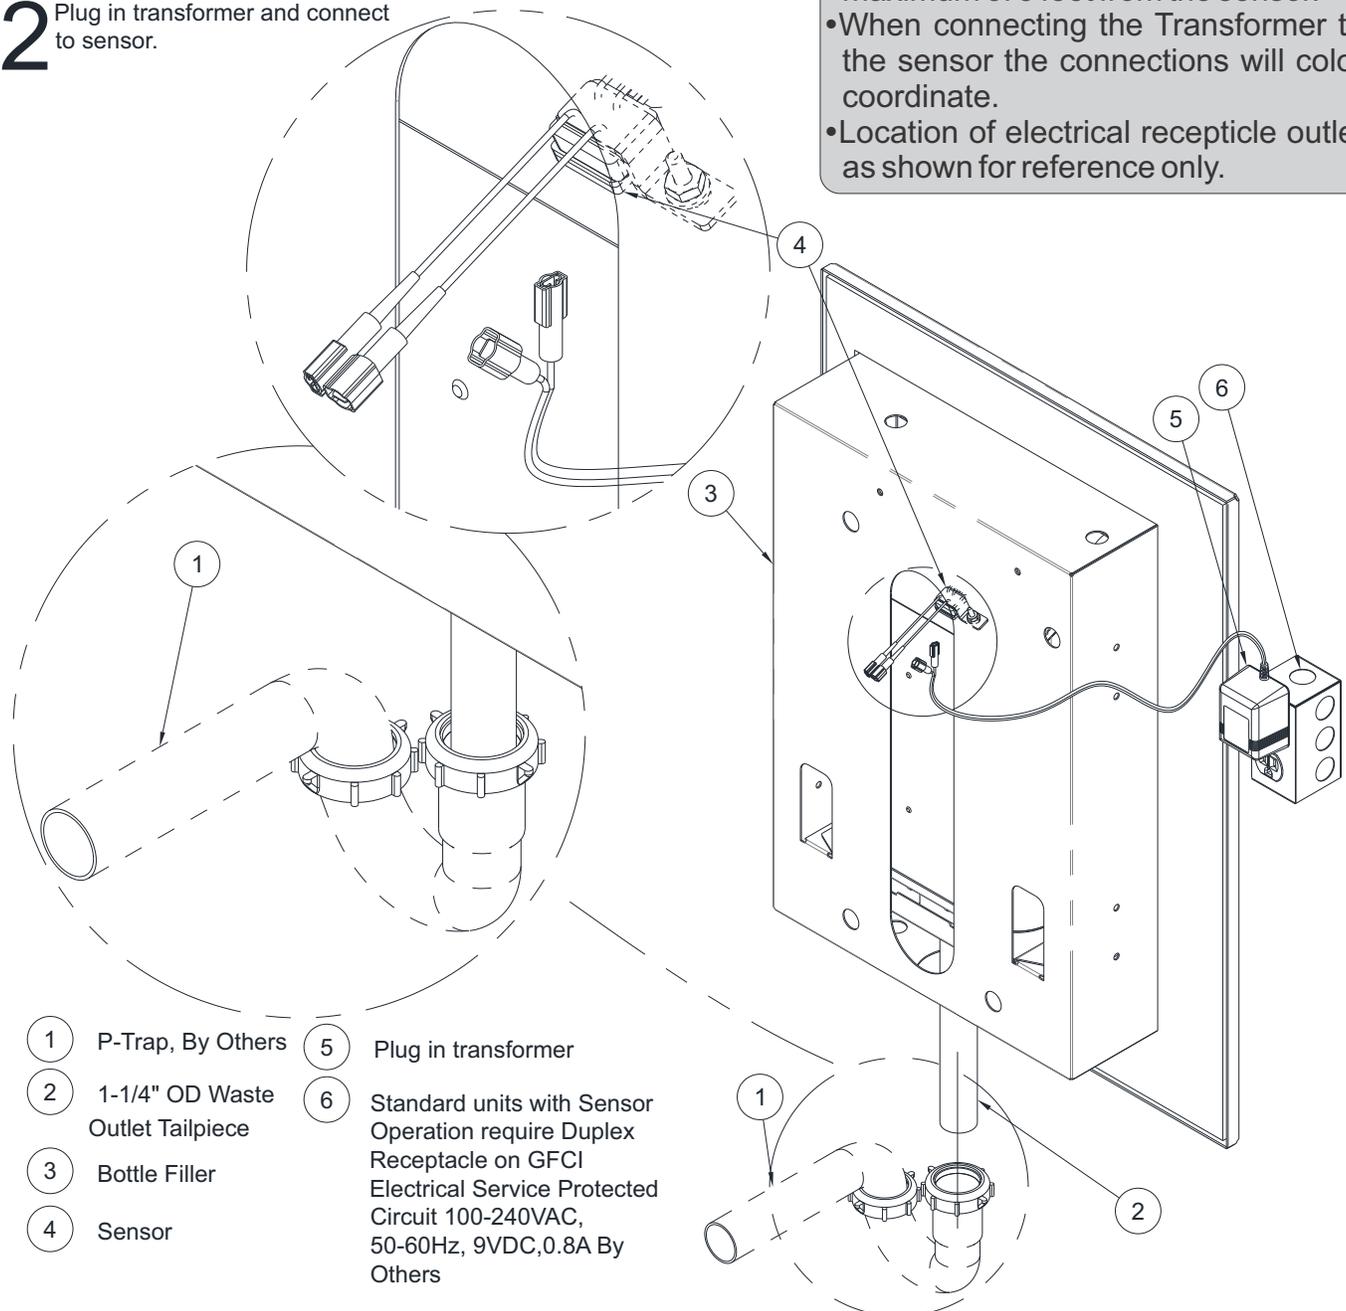

Waste Plumbing Installation & Connecting Bottle Sensor

1 Install P-Trap to Waste outlet.
P-Trap is provided by others.

2 Plug in transformer and connect
to sensor.

! IMPORTANT

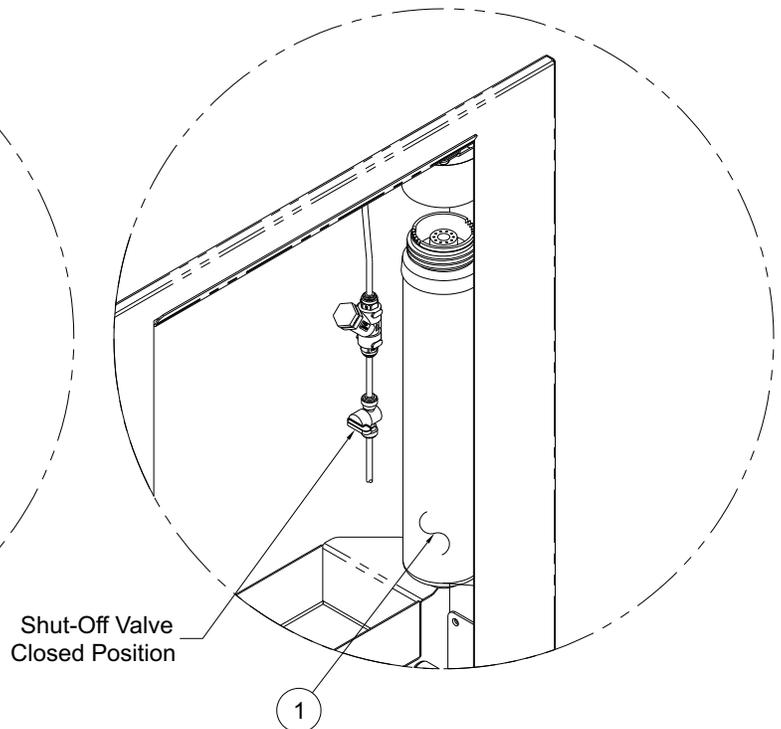

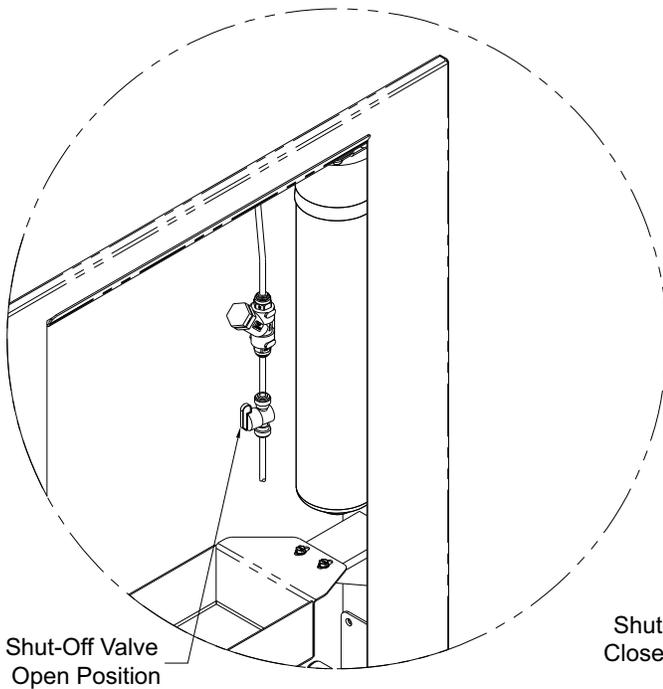

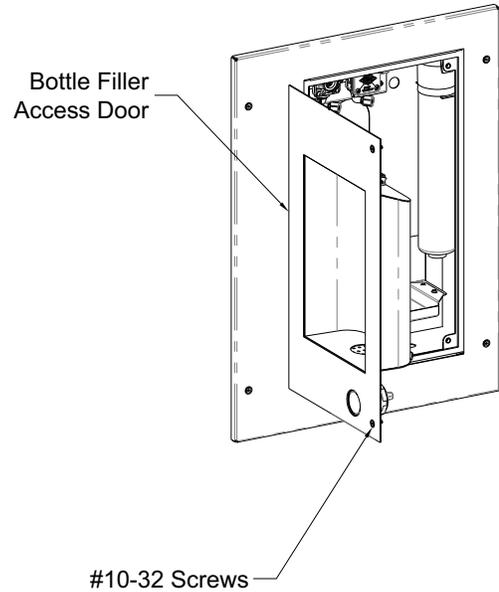

- No Provisions are made regarding the plug in transformer and GFCI Protected Outlet.
- Outlet should be located at a maximum of 5 feet from the sensor.
- When connecting the Transformer to the sensor the connections will color coordinate.
- Location of electrical receptacle outlet as shown for reference only.

- | | |
|------------------------------------|---|
| ① P-Trap, By Others | ⑤ Plug in transformer |
| ② 1-1/4" OD Waste Outlet Tailpiece | ⑥ Standard units with Sensor Operation require Duplex Receptacle on GFCI Electrical Service Protected Circuit 100-240VAC, 50-60Hz, 9VDC, 0.8A By Others |
| ③ Bottle Filler | |
| ④ Sensor | |

Water Filter Cartridge Replacement Instructions:

1. Open Bottle Filler Access Door by unfastening #10-32 screws from Bottle Filler Access Door .
2. Locate Shut-Off Valve Knob and give it a 1/4 turn clockwise to shut-off water supply.
3. With the Filter Assembly secured on the unit, hold the Cap firmly, turn the Replaceable Cartridge Filter counterclockwise to remove.
3. Remove and replace the cartridge turning clockwise to secure.
4. Turn Shut-Off Valve Knob a 1/4 turn counterclockwise to open water supply.
5. Test for leaks and proper operation before closing Bottle Filler Access Door and re-fastening #10-32 Screws.

ITEM #	PART NUMBER	DESCRIPTION
1	7012-313-000	WF1 Filter Replacement Cartridge

Trouble Shooting:

IMPORTANT: BEFORE MAKING ANY OF THE REPAIRS LISTED, MAKE SURE THE ELECTRICAL SUPPLY AND THE WATER SUPPLY VALVE IS SHUT OFF.

TROUBLE SHOOTING:

1. ADJUSTMENTS:

- a. Cartridge – The water flow can be adjusted using a slotted narrow blade screwdriver and turning clockwise to increase flow and counterclockwise to decrease flow.
- b. Bubbler Stream - Bubbler can be rotated slightly to direct the stream backwards or forwards. Adjust the stream to minimize splashing. Splashing may occur from bubbler stream if the unit is not level. Shim lower mounting point, if necessary, to level chiller.

2. RESTRICTED OR NO WATER FLOW:

- a. Ensure water supply service stop valve is fully open.
- b. Verify minimum 20 psig supply line flow pressure.
- c. Check for twists or kinks in outlet tubing.
- d. Check the water inlet "Y" strainer. Sediment from the main supply can get trapped in the screen along with installation materials such as pipe dope and flux. The screen should be cleaned and checked on a regular basis and replace if needed.
- e. The cartridge valve located in the water control assembly or bubbler can also become clogged with foreign material. The cartridge valve can only be replaced and not repaired.
- f. Check flow adjustment. See start up note #3.
- g. Flow control in solenoid valve outlet elbow clogged remove & clean.
- h. No power to transformer connections, loose or wires cut.

3. WATER DRIPS OR WILL NOT SHUT OFF:

- a. Open fixture. Loosen nuts holding valve bracket assembly to bottom of fixture but, do not remove. Move complete valve bracket assembly further back from the front push pad and tighten to lock in place.
- b. Replace valve cartridge.

SENSOR TROUBLE SHOOTING:

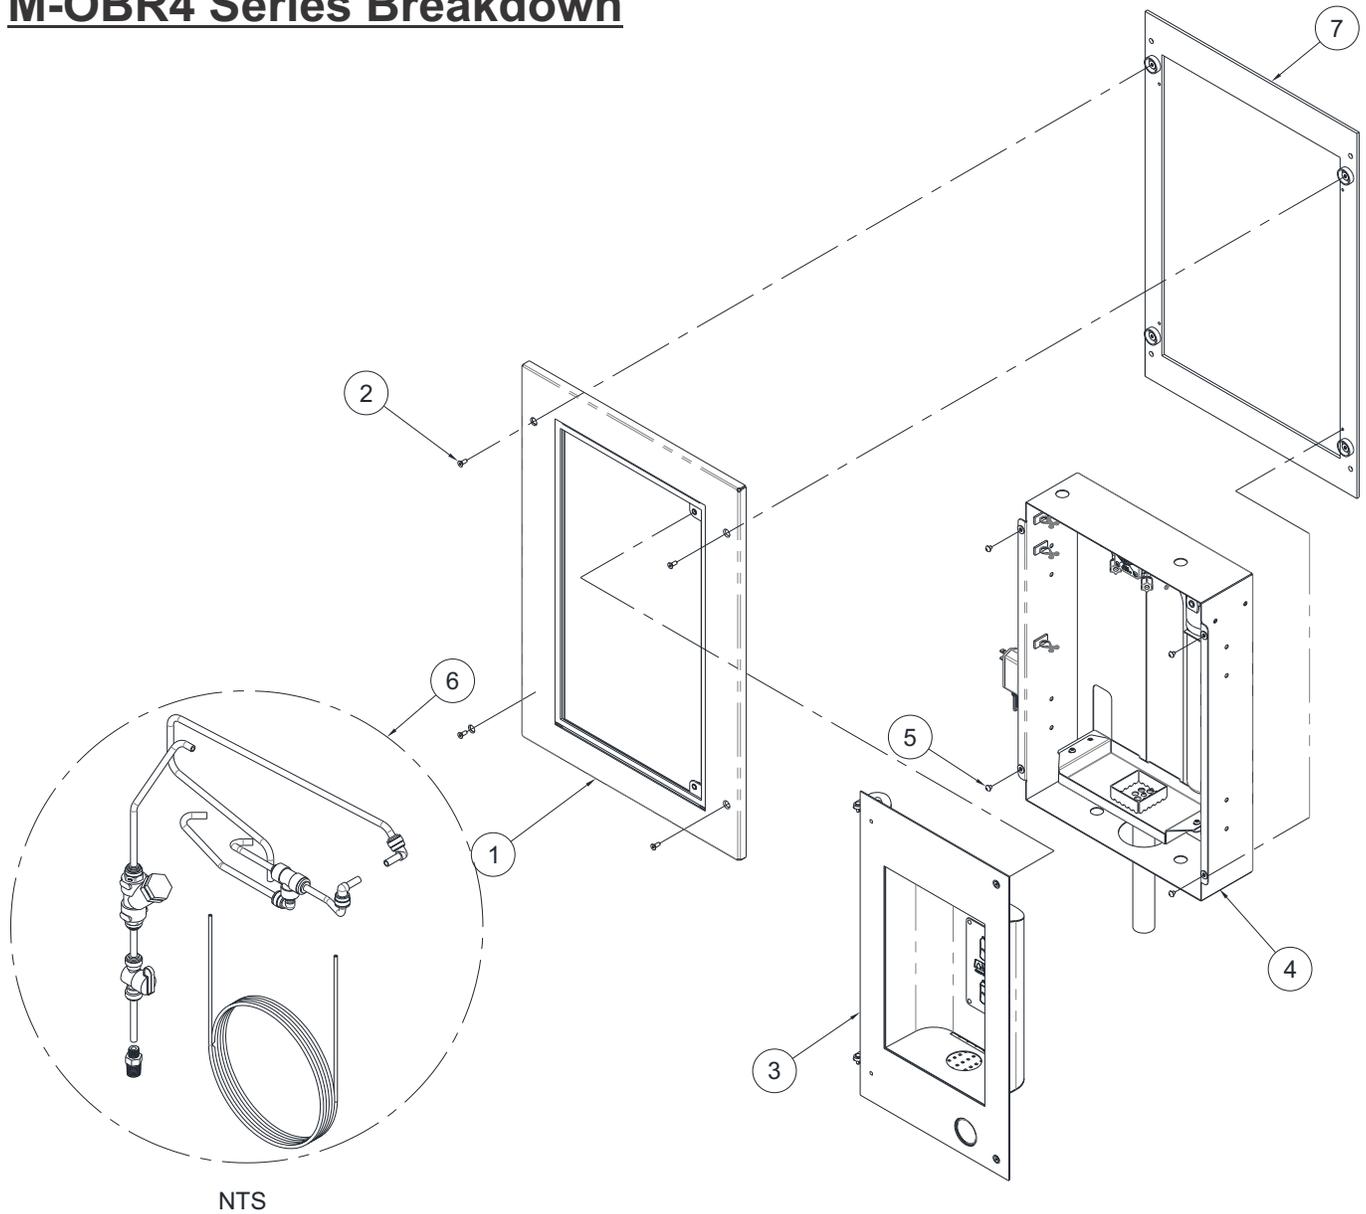

4. IF LIGHT WITHIN SENSOR DOES NOT FLASH ONCE WHEN USER IS WITHIN RANGE:

- a. Verify 120VAC input & 9VDC output transformer output 9VDC.
- b. Replace defective transformer.
- c. Transformer polarity crossed. Replace transformer, sensor may be damaged and also need replacement.
- d. Sensor in "Security Mode" after 30 seconds of consistent detection. Remove source of detection and wait 30 seconds before checking.
- e. Sensor is picking up a highly reflective surface. Eliminate cause of reflection and wait 30 seconds before checking.

5. IF LIGHT WITHIN SENSOR LENS FLASHES ONCE WHEN THE USER IS WITHIN RANGE:

- a. Repair bad connection from sensor to solenoid.
- b. There is debris or scale in the solenoid assembly. Remove solenoid, pull out plunger and spring. Clean with scale remover solution.
- c. There is debris or scale in the center or two holes in convolution of the water diaphragm. Remove and clean.
