Ligature Resistant Grab Bars

Grab Bars are designed to help meet the needs of the disabled. Grab bars are constructed of 1-1/2" outer diameter type 304 stainless steel tubing with a 14 gage "V" shaped closure strip welded to the bottom of the bar. Closure plate includes intermittent welds along wall plate and small holes opposite grab bar to prevent pooling of water and allow water to drain. Exposed surfaces are polished to a satin finish. Selection of appropriate length, configuration, adequate wall backing and installation dependent on application will determine compliance for accessibility. Consult applicable codes for complete requirements.

NOTE: The Grab Bar design meets the required lengths, 1-1/2" dimensions from mounting surface and for Structural Strength requirement for both vertical and horizontal force of 250 pounds per ADA 2010 Standards. However the presence of the Closure Plate may render the Grab Bar non-compliant. Interpretation and requirements are subject to Local Code Authority.
