Designing for Healthcare: Wet Environments

Wet areas in healthcare facilities pose numerous challenges when it comes to designing an environment that is safe for patients and staff. As specialized rooms are being replaced with functional spaces covering a range of mental and physical health concerns, it is important to consider universal design. This course explores how to create spaces that work for all and how to create environments that are durable, hygienic, and ligature and slip resistant.

Ligature-resistant bathroom

Wash Your Hands One More Time

This course outlines the proper handwashing techniques, especially for healthcare and food preparation contexts; explains how germs, viruses, and bacteria are spread and where sanitation problems with sinks may reside; and describes how to select and specify the most appropriate washup, infection prevention, and scrub sinks, countertops, and fitments.

Ligature-Resistant Solutions for Behavioral Healthcare Facilities

In this course, you will learn how to design safe, secure, patient rooms and bathrooms in your behavioral facilities. Attendees will learn about ligature resistant design, guidelines for best practices, how to test for it and why it's important to ensure all patient rooms and bathrooms are reviewed for risk.

Typical bariatric ADA bathroom featuring an “easy to clean under” bariatric toilet and sink

Advances in Plumbing Design for Healthcare

Healthcare facilities are now striving to meet the needs of all patients to offer not only healthy and safe spaces, but inclusive spaces as well. This course reviews innovations in plumbing design and how these designs support trending healthcare needs, such as infection prevention, behavioral healthcare, and bariatric and ADA patients.

Safe Healthcare Water Delivery

Just as healthcare providers strive to stop the spread of disease in the body, so too are facilities trying to stop waterborne viruses and bacteria before they get out of control. This course highlights the concerns and consequences of improper water delivery in healthcare facilities and discusses why they are embarking on a systems approach and using a monitoring system to manage infection control.

Current Trends in Healthcare Plumbing

Healthcare facilities are striving to meet the needs of all patients and caregivers by offering healthy, safe, and inclusive spaces that can be repurposed quickly if needed. This course reviews innovations in plumbing design, such as vacuum plumbing and its applications, and explores how these design innovations support trending healthcare needs, including infection prevention, behavioral healthcare, and bariatric

applications, and fulfill ADA requirements. Several case studies showcasing successful examples are also covered.
